AWARDS - TROPHIES - GIFTS

ABOUT US

Insta Crystal was established in 2019 and specializes in premium quality Crystal Awards, Trophies and Gift products. Located in New Jersey, the company is a "Women Owned and Operated Business" who's family has been in the Crystal industry for two generations. The company is led by a team of experienced professionals with extensive know-how in Crystal design and manufacturing technology. Our goal is to become one of the premium suppliers of Crystal products to the Award, Recognition and Gift industries.

Our products are designed in the USA and are manufactured both locally and overseas. In addition to our standard range of stocked products shown in this catalog, we also specialize in the creation, design, and development of custom products to meet our clients requirements. With a team of experienced crystal artisans using the very best raw materials available, our ability to create that one of a kind masterpiece is unmatched.

In addition to the supply of "Blank Only" products for engravers and etchers, we have our own in-house Engraving technology for clients that prefer a finished decorated product. Our capabilities include, Surface Abrasive Etching and Color Fill, Surface Laser Engraving, Sub Surface 4D Laser Engraving, and UV Direct Color Printing. We can provide you with a "one stop solution", and each of our products comes packaged in a premium quality presentation box.

PERSONALIZATION TECHNIQUES

We are able to decorate & personalize crystal products using a variety of different techniques, this is often determined by the artwork or the engraving area of the product.

We offer the following personalization techniques.

SANDBLAST ENGRAVING

Sandblast engraving is a process that gives a frosted finish with the design or wording etched into the surface of the crystal or glass. Engraving is the roughening of a selected area by directing a high pressure, high speed stream at the surface of the award. As the grains of abrasive hit the selected area, a "frosted" effect is produced. This imprint method gives your personalization more depth and greater dimension.

COLOR FILL

We are able to offer a variety of colors that can be used to infill the sandblast engraving on the crystal and glass products.

UV COLOR IMPRINT

UV Color Imprint can be used to reproduce high resolution full color photographs, company logos and text. Imprinting is achieved by using the latest high resolution direct print technology on crystal and glass with Ultra Violet (UV) cured inks. Unlike Sandblast Etch and Colorfill, which only allows single colors to be applied into the etching, this method creates a full-colored transparent effect. UV Color printing can only be used on flat products.

SUB SURFACE LASER ENGRAVING

Sub surface laser engraving can be used to recreate 2D or 3D images that are suspended in the middle of the flawless optical crystal gift or award. Logos and text will always be imprinted as 2-dimensional images.

CRYSTAL AWARDS

CELESTE

The Circle with Diamond Edge Award reflects light from every angle. The diamond cut edge sparkles. It is available in four sizes and each is shipped in a premium quality Black presentation box.
